Professional Summary

SDET / QA Automation Engineer with hands-on experience building production-grade automation frameworks and custom test management tooling. Proficient in Playwright (JavaScript, TypeScript, Python) and Flutter integration_test, with expertise in POM-based framework design, API validation, and end-to-end regression automation. Built a custom test execution and reporting platform (Vite) with real-time dashboards, severity/priority analytics, and multi-sheet Excel/Google Sheets export. Backend development background in Laravel/PHP enables deeper API-level debugging and cross-functional collaboration. Actively expanding into CI/CD pipeline integration and performance testing.

Education

Gujarat Technological University
B.Tech in Computer Engineering

2021 – 2025
CGPA: 9.18 / 10

Experience

CIMCON Software India Pvt. Ltd.
Software QA Engineer

Apr 2026 – Present
Ahmedabad, Gujarat

- Developed and maintained scalable **Playwright (JavaScript, TypeScript)** and **Flutter integration_test** automation frameworks for web and mobile applications, covering complete E2E business workflows and regression scenarios across Android and iOS.
- Designed reusable POM architecture with centralized locator management and modular utilities for navigation, login, and synchronization, improving framework maintainability and reducing code duplication across multiple modules.
- Handled advanced Flutter UI interactions including dynamic overlays, auto-suggestions, calendar pickers, and async state synchronization; improved test stability using optimized wait strategies, **GetIt** dependency reset handling, and resilient assertions.
- Built a custom **test execution and reporting platform (Vite)** with real-time pass/fail dashboards, severity/priority analytics, module-wise breakdowns, and automated multi-sheet Excel and Google Sheets export, replacing manual reporting workflows entirely.
- Executed regression, smoke, sanity, and negative testing cycles; managed full defect lifecycle with structured bug reports covering reproduction steps, expected vs actual results, screenshots, and recordings.

Infopercept Consulting Pvt. Ltd.
QA Engineer Intern (Manual & Automation)

Nov 2025 – Apr 2026
Ahmedabad, Gujarat

- Designed and maintained comprehensive test suites covering functional, edge, and negative scenarios across 5 core application modules.
- Executed regression, smoke, and sanity testing cycles, identifying critical defects before production releases.
- Managed **end-to-end bug lifecycle** using ClickUp, GitLab, and Trello — including defect logging, prioritization, tracking, retesting, and closure.
- Created detailed bug reports with reproduction steps, expected vs actual results, and supporting evidence (screenshots and recordings).
- Analyzed automation results to detect UI, functional, and data-level defects, escalating high-severity findings for immediate resolution.
- Reviewed business requirements and user flows to ensure complete test coverage and identify untested edge cases.

Viaansh Infotech LLP
Back-end Developer — PHP, Laravel, WordPress

May 2025 – Oct 2025
Ahmedabad, Gujarat

- Developed a **Hospital Management System** using Laravel and MySQL with role-based and multi-tenant architecture.
- Built custom WordPress themes and plugins with dynamic admin configuration.
- Improved backend performance by **~30%** through query optimization and reusable code design.

Testing & Automation Projects

Custom Test Execution & Reporting Platform

2026

Internal Tool — Vite, Excel/Google Sheets

- Built a web-based **test management platform** for structured test case tracking, real-time execution monitoring, and multi-format report generation.
- Designed a **real-time execution dashboard** displaying total, passed, failed, blocked, and not-executed counts with live pass rate and fail rate metrics, severity/priority breakdown charts, and module-wise analytics.
- Built an edit interface for live status updates and inline comments, and maintained an execution history log enabling historical comparison across test cycles.
- Developed **automated Excel and Google Sheets export** producing 4-sheet reports: Dashboard (KPIs + module/severity/priority breakdown), Project Details, Test Cases, and Summary.

RTU Sensor Data Monitoring & Automation System

2026

Python Automation + Real-Time Dashboard

- Developed a real-time automation system using Python to monitor live IoT sensor data from a web dashboard.
- Designed a **time-based polling and change-detection mechanism** (10s interval) using timestamp comparison.
- Implemented a listener-based architecture to capture and log dynamic sensor data into structured JSON format.
- Built a custom **live dashboard** to visualize real-time test execution logs and sensor readings.
- Automated continuous data validation by comparing previous and current readings for accuracy.
- Developed **live CSV export functionality** for real-time reporting and historical analysis.
- Enabled configurable test duration (5 minutes to 24 hours) and dynamic sensor selection via UI, reducing manual monitoring effort across long-duration observation workflows.

CIMTrack Mobile Application Automation Suite

2026

Flutter integration_test + E2E Automation

- Developed end-to-end mobile automation using **Flutter integration_test** for critical business workflows and regression testing across Android and iOS environments.
- Automated authentication, CRUD operations, history validation, and role-based workflows across multiple application modules.
- Implemented reusable **Page Object Model (POM)** architecture with centralized locators and modular automation utilities.
- Handled advanced Flutter UI interactions including overlays, auto-suggestions, calendar pickers, scrolling, and async synchronization.
- Improved test stability using optimized wait strategies, **GetIt** dependency reset handling, and resilient assertions.
- Reduced manual regression effort significantly through automated frontend-backend workflow validation.

GSOS Web Application Automation

2026

Playwright Automation Framework (JavaScript, TypeScript)

- Designed and implemented a scalable Playwright automation framework using Page Object Model (POM) with TypeScript for type safety and improved maintainability.
- Built reusable components and utilities to improve framework maintainability and reduce code duplication.
- Implemented session handling to persist authentication state across test runs, reducing overall suite execution time.
- Handled dynamic elements using parameterized locators and flexible selectors for reliable cross-run stability.

API Testing & Automation

Postman + JavaScript

- Designed and executed API test suites using Postman collections for CRUD operations across multiple service endpoints.
- Automated API validation using JavaScript pre-request and test scripts for dynamic token handling and chained requests.
- Validated authentication flows including token-based authorization and session handling.
- Performed response, schema, and business logic validation with comprehensive status code and error message checks.

Technical Skills

Testing: Manual Testing, Functional Testing, Regression Testing, Smoke Testing, Sanity Testing, Exploratory Testing, Boundary & Negative Testing, End-to-End (E2E) Testing, Integration Testing

Automation: Playwright (JavaScript, TypeScript, Python), flutter_test, Page Object Model (POM), UI Automation Framework Design, Mobile Application Automation

Test Management & Reporting: Custom Test Reporting Platform, Excel & Google Sheets Reporting, Module-wise Analytics, Severity/Priority Dashboards

API Testing: Postman, REST API Testing, API Automation, Response & Schema Validation, Token-based Auth Testing

Languages: JavaScript, TypeScript, Python, PHP, SQL

Tools & Platforms: JIRA, ClickUp, Trello, GitLab, Bitbucket, Git

Databases: MySQL, SQL Query Validation

Development: Laravel, Backend Debugging, MVC Architecture, REST API Integration
